

Error 109: Circuit Board Failure

Board F-76854 can be used as a replacement for boards F-456766, F-39934 & F-388474 with some modifications. Place Board F-76854 in slot 1. From the external pins on the board hook-up to the Logic Level (5V to 3.3 V) Reducer Circuit. The red wire goes to pin 5 and the brown wire goes to pin3. Hook this circuit up to the environmental controls unit through the EX-2 socket and cable. Override the safety lock on EX-2 by pushing the red and blue override buttons simultaneously after the circuit is connected.
